

Step 1:

Take a square piece of paper and fold it in half diagonally one way to create a triangle. Open it up and repeat the fold on the other side.

Step 2:

Fold corners upward towards the peak, ensuring that edges are lined up to the centerline.

Step 3:

Bring the edges together and crease at the center fold to create a triangle.

Step 4:

Fold peak upwards towards the open flaps. Make sure that the point of your new triangle doesn't go beyond the paper. Crease well and repeat on the other side.

Step 5:

Take the right side (side without the open flaps) and fold downwards, crease well. Repeat on the other side.

Step 6:

Unfold the fold that you have just made and place your left thumb on the corner without the open flaps. Unfold the triangle and use your right hand to lift the open flaps and fold over your thumb. Repeat step on the other side.

Step 7:

To add a beak, fold a portion of the front to one side and then the other. Open it up and push down to create an inverse fold.

Step 1:

Fold and push down the center to create an inverse fold for the tail.
